EDUCATION

2022 – 2026

B.Sc. in Computer Engineering

Eskişehir Osmangazi University, Eskişehir · 4th-year student

TECHNICAL SKILLS

Programming languages	C# (3 years of experience), SQL, JavaScript
Frameworks	ASP.NET Core Web API, .NET 10, ABP Framework 10, Entity Framework Core, xUnit
Data & infrastructure	PostgreSQL, Redis, RabbitMQ, Docker, Docker Compose, nginx
Architecture	Multi-tenancy, layered architecture, event-driven messaging, outbox/inbox pattern, permission-based authorization
Tools	JetBrains Rider, Git, GitHub, Linux server administration

EXPERIENCE & PROJECTS

2025 – 2026
Live

Kuafory · Multi-sector booking and business management platform

Personal product: design, development and deployment end to end

Hair salon: kuafor.randevuyeri.com.tr
Dentistry: dishekimi.randevuyeri.com.tr
Veterinary: veteriner.randevuyeri.com.tr
Nail art: nailart.randevuyeri.com.tr
Physiotherapy: fizyoterapi.randevuyeri.com.tr
Psychology: psikolog.randevuyeri.com.tr
Dietitian: diyetisyen.randevuyeri.com.tr
Laser hair removal: lazer.randevuyeri.com.tr

Interface in Turkish, English and German.

- Layered, multi-tenant SaaS on ASP.NET Core / ABP Framework 10. One codebase serves eight sectors: hair salons, physiotherapy, dentistry, psychology, veterinary, dietetics, nail art and laser hair removal. Sector differences are handled with feature flags and a terminology dictionary; the code is not forked.
- The identity service runs as a separate application. The two services communicate over HTTP and RabbitMQ, and their data is separated at schema level.
- Reliable messaging with the outbox/inbox pattern: events are written in the same transaction as the business record, and idempotent consumers prevent duplicate processing.
- Permission-based authorization and resource ownership checks; consent flows for KVKK (the Turkish data protection law, similar to the GDPR) and health data.
- Shared infrastructure extracted into 7 reusable NuGet packages: manager/repository bases, messaging, multi-tenancy, authorization.
- Deployed on my own server with Docker Compose: nginx, Let's Encrypt, PostgreSQL, Redis, RabbitMQ. More than 1,600 unit tests.

Feb – Aug 2026
7 months

Backend Developer Intern · ÇözümTR Payment Systems

Eskişehir

- Backend development for the company's .NET / ABP Framework products.
- Built and maintained REST endpoints in a multi-tenant ABP codebase (C#, .NET, EF Core).

Jun – Aug 2025
3 months

Software Intern · Piton Technology

Eskişehir

- Built two modular banking applications with ABP Framework (.NET).
